

Thank you for purchasing the Flake King 1000 Dry Metal Flake Gun.

Assembly Tools required –

1.5mm Allen Key, 12mm, 13mm (1/2"), 16mm (5/8"), 20mm (3/4" AF) Spanners

1). Attaching the barrel to the gun.

Unscrew the grub screw to allow you to gently push the gun adaptor into the barrel and tighten the grub screw using the 1.5mm allen key -

If you want the barrel to self level set the grub screw to a point where it holds the barrel in but still allows it to rotate around the adaptor.

If you want the gun and barrel to be rigid then set the grub screw as far as it will go without stripping the allen head.

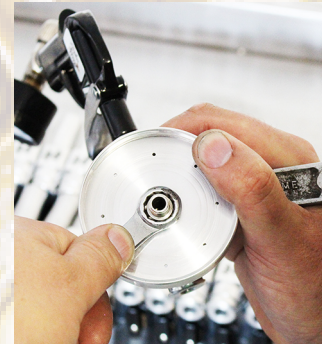

2). Attaching the Air Regulator

Warning: We specifically chose a light ergonomic gun handle, because of this it is particularly important that you use a spanner on the handle nut when tightening the air regulator nut, so you do not shear the handle when tightening.

A. Screw the regulator nut by hand onto the air inlet of the gun – you will find it at the base of the gun.

B. Rotate the regulator around so that you can see the dial easily **and** that you are able to adjust the air pressure whilst using the gun.

C. When you have found the best position for the air regulator and gauge place the 13mm (1/2") spanner on the gun side nut and the 16mm (5/8") regulator nut. Restrain the gun "nut" whilst tightening the regulator nut up with the 16mm-5/8" spanner.

3) Attaching the jar assembly

a) Simply screw the lid directly to the flake valve. Hand tight should be sufficient, but if you wish to make it a more permanent fitting then apply some lock seal to the connectors thread and using a 20mm (3/4" AF) restrain from turning the flake valve using the 20mm (3/4" AF) spanner tighten the jar lid using the 12mm spanner tighten the connector up.

N.B. When unscrewing the jar from the lid always grip the lid.

Your Flake King 1000 will also need connecting to either a quick release connector and airline or directly to an airline.

You are now ready to start flaking.

Did you Know?

That we manufacture 3 different versions of dry flake guns from an airbrush adaptor, to a mini gun that runs off an airbrush compressor to the 1000 (this version)

We also have over 60 colours of flakes in 5 sizes available in our dry flake range, with exciting new products to come in the not too distant future.

For more information on how to use any of the flake king products visit our website:
